

RICE WHITENER

Rice Whitener is designed basing on a friction between rice-screen-abrasive stone (it's section profile is cone cylinder) combining with rubber bar to take off a thin bran on surface of rice. In the mean time, air pressure is put directly into the gap of stone and screen so bran is taken out ultimately, finished rice is cool and without bran.

RICE WHITENER

SPECIFICATIONS

Model	Capacity tons/hour	Main machine power kW	Fan power kW	Speed of main shaft r.p.m	Net weight kg	Dimensions (LxWxH) mm
RW20	2-3	22	4	320÷420	1500	1650x750x2250
RW40	3-4	30	5.5	260÷360	1850	1750x820x2400
RW60	4-6	37	7.5	225÷340	2640	1850x940x2950
RW80	6-8	55/75	11	195÷260	3460	2320x1160x2950
RW100	8-10	75/90	15	200÷260	3460	2420x1160x2890

- With a cone structure, it is easy to adjust capacity especially with high moisture materials. Stone is in cone shape, so it is easy to adjust the gap of the stone and screen.
- High whiteness efficiency: Bran peeling rate: (4-8)%.
- Breakage, cracking rate is low: (3-8)%
- The whiteness level is changeable easily by adjusting a gap between rubber brake and abrasive stone.
- Autostable the whiteness level.
- Capacity can be adjusted easily by lifting up-down the stone with a handle jack at it's base.
- Small size, high capacity, smooth and stable work, convenient for adjusting and operating.
- Simple structure, easy to assemble/disassemble and to maintain.
- Rice whitener can be used for parboiled rice, green bean.
